## HOSTING

Whether you're tired of dealing with your in-house servers or looking for alternatives to your current hosting services provider, Lindotiger offers excellent managed dedicated server-hosting solutions. Turn to Lindotiger for Managed Dedicated Servers and Private Cloud hosting solutions.

## BENEFITS

- **Save money**—If you're with another managed hosting provider, there's a good chance we can save you money while giving you a lot more value. If you're weighing whether to go in-house or outsource, think about how you'll bypass the capital expense and go straight to working on your business applications. No fuss. No muss.
- **Free consultation**—We've got serious hosting experts on board to evaluate your needs and recommend the best solution for your situation. No obligation.
- **Customize like crazy**—Need a firewall or load balancer? Got it. Solid-State Storage? Absolutely. Virtualization layer? Definitely!
- **Customer Support**—We have an experienced support team dedicated to managed hosting services so we can troubleshoot and solve any hosting issues on the double.

**We specialize in social network hosting and maintenance. See our largest clients and current user base on page 2.**

- **Satisfaction Guarantee**—We earn your business every day. If you're not happy, all we ask is 30 days notice on our managed hosting services.

## TWO CUSTOMIZABLE SOLUTIONS FROM ONE EXPERIENCED PROVIDER

Lindotiger offers two managed hosting services: Managed Dedicated Servers and Private Cloud solutions. We can tailor either hosting solution to your specifications with options such as firewalls, load balancers, and storage.

- **Managed Dedicated Servers**—Ideal for businesses that want to outsource the capital expense and administrative headaches of acquiring, managing, monitoring and maintaining their business-critical servers 24/7. [Learn More >](#)
- **Private Cloud Server Virtualization**—Dedicated servers with a virtualization layer on top. Businesses choose a private cloud solution when they need to run virtual machines and when they want more control over their application performance or their user's experience than a utility cloud solution can provide. Many of our Private Cloud customers come to us from utility or public cloud solutions.

## Managed Dedicated Server Hosting

## Private Cloud Server Hosting

*The key difference here is that Private Clouds include a virtualization layer so you can run virtual machines. Lindotiger can customize either managed hosting solution for you with firewalls, load balancers, storage and more.*

*Some of the biggest names utilize our services*

## LARGEST CLIENTS

Badoo.com currently hosting 100 million users with 100% uptime.

Small version of video social network currently hosting 1 million users.

Social video site hosting 500,000 users.

Social video site hosting 100,000 users.

## TECHNICALLY SPEAKING

Lindotiger Private servers provide Xen-based virtual machines running on an isolated host infrastructure. This is an excellent alternative to a utility cloud service such as Amazon EC2. Lindotiger Private Cloud solutions allow customers to take advantage of high performance storage for relational databases and PCI-compliant network infrastructure while gaining the flexibility of industry-leading virtualization solutions.

Like our dedicated server offerings, all of Lindotiger's private cloud server offerings can be coupled with dedicated firewalls or load balancers. Standard features of private cloud solutions include:

- Multiple dedicated servers running Xen hypervisors
- Multiple Gigabit Ethernet network interfaces attaching hypervisors to both Internet transit and ZFS storage services
- DNS services
- 24x7 monitoring
- Email/phone technical support

Facilities diverse data centers in West Coast, and East Coast, access to London, England, United Kingdom.

- Uninterruptible Power Supply (UPS) powered by independent Leibert and Powerware units.
- Around the clock environmental monitoring to ensure temperature remains at a constant 68°F.
- Raised flooring for under floor cooling with cold / hot isle configuration.
- Fully Locking Cabinets for extra physical security.
- Pre-action dry pipe fire suppression system rated for telecommunications / data center use.
- Access to the data center floor is restricted by biometric locks and key card access.
- All areas of the facility are monitored 24/7 via CCTV as well as patrols by security staff.
- Video recordings are kept for a five day period.
